## Reorientation of a Liquid Surface

### Motivation

### Experimental Setup

System overview

Experiment Conditions

### Prediction of Reorientation Behavior

OHNESORGE Number for a 50 mm Diameter Cylinder

Center Peak Location

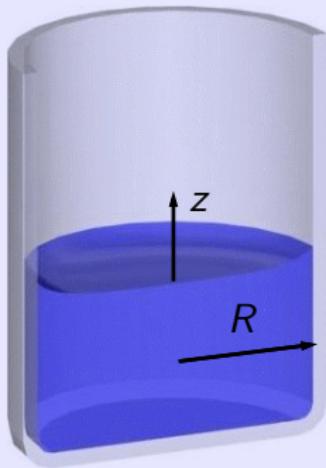

Center Peak Time

Wall Peak Location

Numerics

### Outlook

$$k_{zi} \approx 9.81 \text{ m/s}^2$$

- ▶ Quiescent liquid.
- ▶ High BOND number with  $Bo = \rho k_{zi} R^2 / \sigma >> 1$ .
- ▶ Flat liquid surface at the center location.

*Initial conditions:*

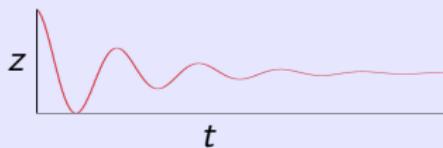

# Reorientation of a Liquid Surface

$$k_{zi} \approx 9.81 \text{ m/s}^2$$

free surface at the  
center point ( $z_{cp}$ ):

$$k_z \approx 0 \text{ m/s}^2$$

Reorientation of the

Investigating the reorientation of cryogenic propellants:

- ▶ Behavior of cryogenic propellants (liquid Hydrogen and Oxygen) upon step reduction of gravity.

---

\* $\text{LN}_2$  at 0.1 MPa; D = 50 mm

†Previous Experiments

Investigating the reorientation of cryogenic propellants:

- ▶ Behavior of cryogenic propellants (liquid Hydrogen and Oxygen) upon step reduction of gravity.
- ▶ Small OHNESORGE number:  $\text{Oh} \approx 3.0 \cdot 10^{-4}$  (\*)

---

\*  $\text{LN}_2$  at 0.1 MPa; D = 50 mm

† Previous Experiments

Investigating the reorientation of cryogenic propellants:

- ▶ Behavior of cryogenic propellants (liquid Hydrogen and Oxygen) upon step reduction of gravity.
- ▶ Small OHNESORGE number:  $\text{Oh} \approx 3.0 \cdot 10^{-4}$  (\*)

$$\text{Oh} = \frac{t_{pv}}{t_{pu}} = \sqrt{\frac{\nu^2 \rho}{\sigma R}} \quad 0.98 \cdot 10^{-3} \leq \text{Oh} \leq 20.17 \cdot 10^{-3} \quad (\dagger)$$

---

\*  $\text{LN}_2$  at 0.1 MPa; D = 50 mm

† Previous Experiments

Investigating the reorientation of cryogenic propellants:

- ▶ Behavior of cryogenic propellants (liquid Hydrogen and Oxygen) upon step reduction of gravity.
- ▶ Small OHNESORGE number:  $\text{Oh} \approx 3.0 \cdot 10^{-4}$  (\*)

$$\text{Oh} = \frac{t_{pv}}{t_{pu}} = \sqrt{\frac{\nu^2 \rho}{\sigma R}} \quad 0.98 \cdot 10^{-3} \leq \text{Oh} \leq 20.17 \cdot 10^{-3} \quad (\dagger)$$

- ▶ Small MORTON number:  $\text{Mo} < 10^{-3}$  (\*)

---

\*  $\text{LN}_2$  at 0.1 MPa; D = 50 mm

† Previous Experiments

Investigating the reorientation of cryogenic propellants:

- ▶ Behavior of cryogenic propellants (liquid Hydrogen and Oxygen) upon step reduction of gravity.
- ▶ Small OHNESORGE number:  $\text{Oh} \approx 3.0 \cdot 10^{-4}$  (\*)

$$\text{Oh} = \frac{t_{pv}}{t_{pu}} = \sqrt{\frac{\nu^2 \rho}{\sigma R}} \quad 0.98 \cdot 10^{-3} \leq \text{Oh} \leq 20.17 \cdot 10^{-3} \quad (\dagger)$$

- ▶ Small MORTON number:  $\text{Mo} < 10^{-3}$  (\*)

$$\text{Mo} = \frac{t_{pvLc}}{t_{puLc}} = \left( \frac{k_{zi} \nu^4 \rho^3}{\sigma^3} \right)^{1/4} \quad 3.63 \cdot 10^{-3} \leq \text{Mo} \leq 52.75 \cdot 10^{-3} \quad (\dagger)$$

---

\*  $\text{LN}_2$  at 0.1 MPa; D = 50 mm

† Previous Experiments

Investigating the reorientation of cryogenic propellants:

- ▶ Behavior of cryogenic propellants (liquid Hydrogen and Oxygen) upon step reduction of gravity.
- ▶ Small OHNESORGE number:  $\text{Oh} \approx 3.0 \cdot 10^{-4}$  (\*)

$$\text{Oh} = \frac{t_{pv}}{t_{pu}} = \sqrt{\frac{\nu^2 \rho}{\sigma R}} \quad 0.98 \cdot 10^{-3} \leq \text{Oh} \leq 20.17 \cdot 10^{-3} \quad (\dagger)$$

- ▶ Small MORTON number:  $\text{Mo} < 10^{-3}$  (\*)

$$\text{Mo} = \frac{t_{pvLc}}{t_{puLc}} = \left( \frac{k_{zi} \nu^4 \rho^3}{\sigma^3} \right)^{1/4} \quad 3.63 \cdot 10^{-3} \leq \text{Mo} \leq 52.75 \cdot 10^{-3} \quad (\dagger)$$

- ▶ High initial BOND number:  $\text{Bo}_i \approx 550$  (\*)

---

\*  $\text{LN}_2$  at 0.1 MPa; D = 50 mm

† Previous Experiments

Investigating the reorientation of cryogenic propellants:

- ▶ Behavior of cryogenic propellants (liquid Hydrogen and Oxygen) upon step reduction of gravity.
- ▶ Small OHNESORGE number:  $\text{Oh} \approx 3.0 \cdot 10^{-4}$  (\*)

$$\text{Oh} = \frac{t_{pv}}{t_{pu}} = \sqrt{\frac{\nu^2 \rho}{\sigma R}} \quad 0.98 \cdot 10^{-3} \leq \text{Oh} \leq 20.17 \cdot 10^{-3} \quad (\dagger)$$

- ▶ Small MORTON number:  $\text{Mo} < 10^{-3}$  (\*)

$$\text{Mo} = \frac{t_{pvLc}}{t_{puLc}} = \left( \frac{k_{zi} \nu^4 \rho^3}{\sigma^3} \right)^{1/4} \quad 3.63 \cdot 10^{-3} \leq \text{Mo} \leq 52.75 \cdot 10^{-3} \quad (\dagger)$$

- ▶ High initial BOND number:  $\text{Bo}_i \approx 550$  (\*)

$$\text{Bo} = \frac{\rho k_{zi} R^2}{\sigma} \quad 27.7 \leq \text{Mo} \leq 194.5 \quad (\dagger)$$

---

\* $\text{LN}_2$  at 0.1 MPa; D = 50 mm

†Previous Experiments

Investigating the reorientation of cryogenic propellants:

- ▶ Behavior of cryogenic propellants (liquid Hydrogen and Oxygen) upon step reduction of gravity.
- ▶ Small OHNESORGE number:  $\text{Oh} \approx 3.0 \cdot 10^{-4}$  (\*)

$$\text{Oh} = \frac{t_{pv}}{t_{pu}} = \sqrt{\frac{\nu^2 \rho}{\sigma R}} \quad 0.98 \cdot 10^{-3} \leq \text{Oh} \leq 20.17 \cdot 10^{-3} \quad (\dagger)$$

- ▶ Small MORTON number:  $\text{Mo} < 10^{-3}$  (\*)

$$\text{Mo} = \frac{t_{pvLc}}{t_{puLc}} = \left( \frac{k_{zi} \nu^4 \rho^3}{\sigma^3} \right)^{1/4} \quad 3.63 \cdot 10^{-3} \leq \text{Mo} \leq 52.75 \cdot 10^{-3} \quad (\dagger)$$

- ▶ High initial BOND number:  $\text{Bo}_i \approx 550$  (\*)

$$\text{Bo} = \frac{\rho k_{zi} R^2}{\sigma} \quad 27.7 \leq \text{Mo} \leq 194.5 \quad (\dagger)$$

- ▶ Observation of Layer Formation.

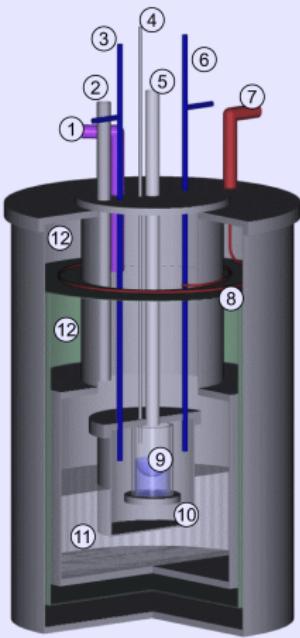

---

\*  $\text{LN}_2$  at 0.1 MPa; D = 50 mm

† Previous Experiments

# Experimental Setup

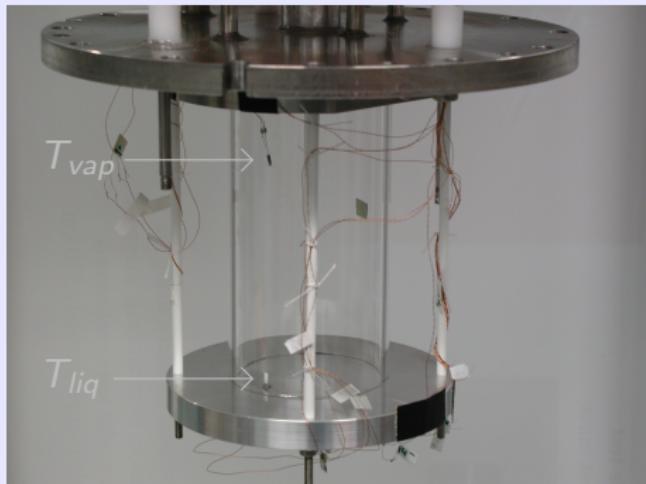

## System overview

- ① Outer vent line
- ② Outer filling tube
- ③ Endoscope
- ④ Inner filling tube
- ⑤ Inner vent line
- ⑥ Light source
- ⑦ Outer vent line
- ⑧ Heat radiation shield
- ⑨ Fluid test chamber
- ⑩ Vacuum insulation
- ⑪ LN<sub>2</sub> bath
- ⑫ Insulation vacuum

# Experimental Setup

## Experiment Conditions

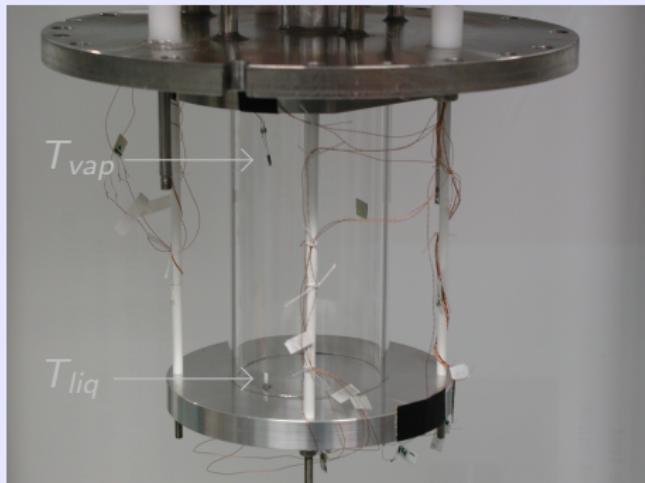

- ▶ Liquid and Vapor of pure Nitrogen.
- ▶ Liquid and Vapor at Saturation state.
- ▶ Pressure range:  
 $\approx 0.07 \leq P \leq 0.17$  [MPa]
- ▶ Temperature range  
 $\approx 74 \leq T \leq 82$  [K]

Liquid and Vapor conditions:

# Experimental Setup

## Experiment Conditions

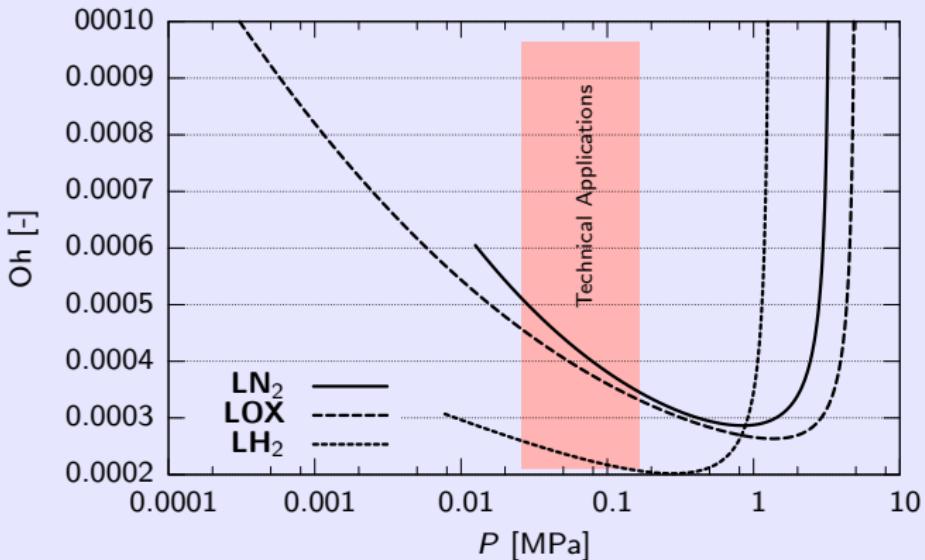

### Data acquisition:

- ▶ High speed video recording.
- ▶ Vapor pressure data recording.
- ▶ Liquid and Vapor Temperature data recording.

# Prediction of Reorientation Behavior

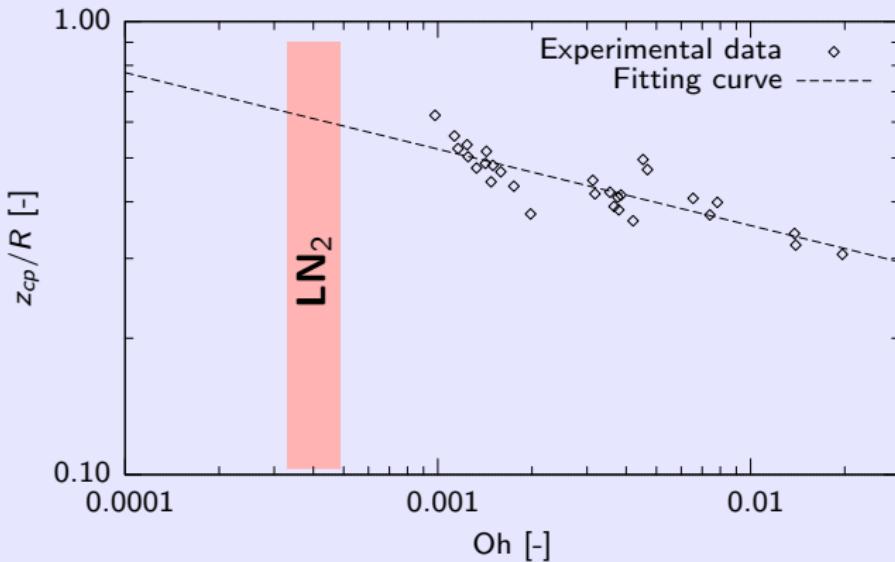

OHNESORGE Number for a 50 mm Diameter Cylinder

OHNESORGE number for  $\text{LN}_2$ ,  $\text{LH}_2$  and  $\text{LOX}$  in a right circular cylinder with  $D = 50$  mm as function of liquid pressure.

# Prediction of Reorientation Behavior

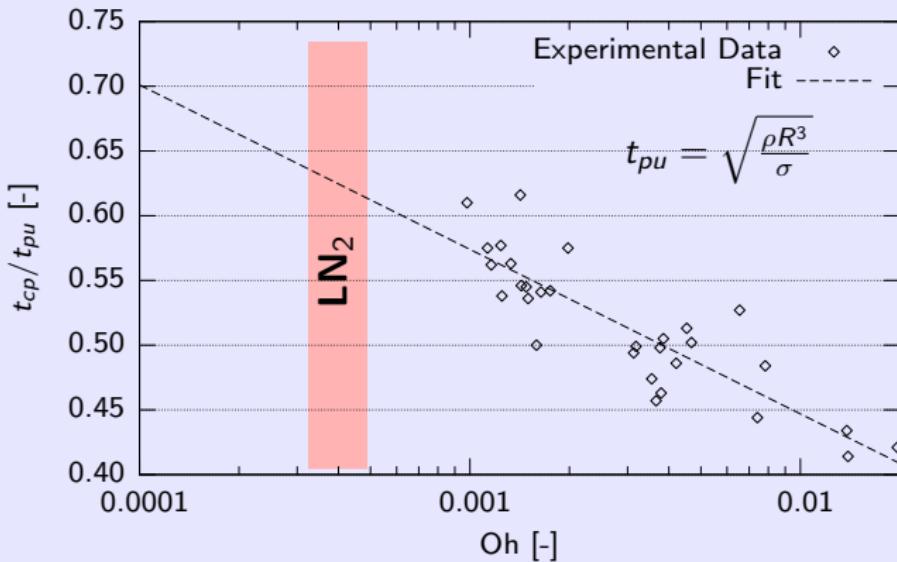

Center Peak Location

Center peak location reaches  $z_{cp} \approx 20 for  $\text{LN}_2$  at  $P = 0.1$  MPa in a right circular container with  $D = 50$  mm.$

# Prediction of Reorientation Behavior

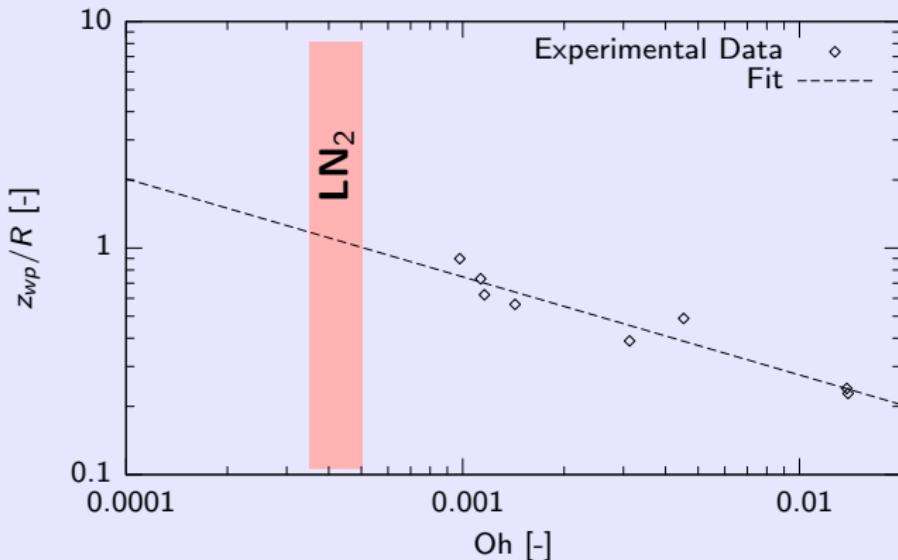

Center Peak Time

Center peak time is about  $t_{cp} \approx 1.5$  s for  $LN_2$  at  $P = 0.1$  MPa in a right circular container with  $D = 50$  mm.

# Prediction of Reorientation Behavior

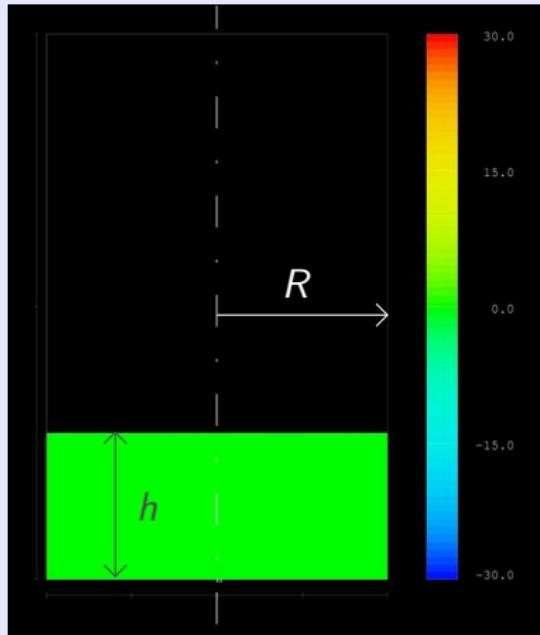

Wall Peak Location

Wall peak location reaches  $t_{wp} \approx 26$  mm for  $\text{LN}_2$  at  $P = 0.1$  MPa in a right circular container with  $D = 50$  mm.

# Prediction of Reorientation Behavior

Numerics

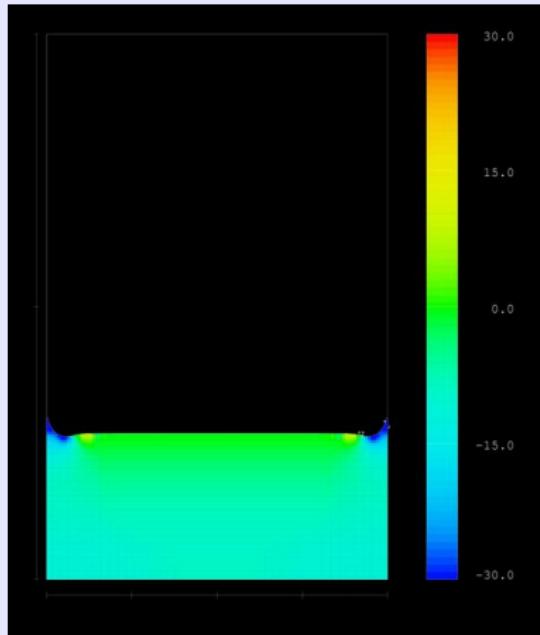

Numerical simulation with  
FLOW-3D vers. 8.2.5:

- ▶  $R = 25 \text{ mm}$
- ▶  $h = 21.5 \text{ mm}$
- ▶  $P = 0.102 \text{ MPa}$
- ▶ Grid size:  $60 \times 195$

# Prediction of Reorientation Behavior
